

KEARNS OQUIRRH PARK FITNESS CENTER

CASE STUDY: **KOPFC**

Community Recreation Center Upgrades to WiFi 6

KOPFC (Kearns Oquirrh Park Fitness Center) is a community recreation center located in Kearns, Utah. The facility has 3 indoor pools, an outdoor pool waterpark with diving platforms, multiple NBA-sized basketball courts, weight/cardio rooms, and tennis/pickleball courts. The community center hosts thousands of people daily during the summer months.

KOPFC

"This is a high-density facility, which means there are always hundreds of people here. So across their facility with all of their guests, at any given time people put a large demand on the WiFi system, and that's why we needed WiFi access points capable of handling that kind of demand"

- Greg Montgomery, VP Technical Operations,
Tym Smart Homes and Theaters

A Need for Speed

The KOPFC facilities were using an antiquated WiFi 5 network deployment. Speeds were not what they wanted, so they were looking to refresh with the latest technology. They also wanted to move to a cloud-based system, so Alta Labs was the perfect solution.

Installing an AP6-Pro at KOPFC

A one for one swap of all twenty one existing WiFi APs throughout the facility to Alta Labs AP6-Pro APs has vastly increased performance speeds and coverage (see the before and after coverage maps on the next page). KOPFC hosts summer movie nights on their south field. The WiFi speeds were not great using their previous WiFi 5 network. They are now getting 100+ Mbps at the outer edge of the field where they have summer movie nights.

"It's been so good that people come here just for the WiFi... Our guests need top notch WiFi"

- Kurt "Q" Cusick, Systems Administrator,
Executech / KOPFC
